

RJ3XX High Precision Power Analyzer

Product Description

RJ311series of Precision Power Analyzers are divided into RJ311/310/330/340/360, individually corresponding to 1-channel, 3-channel, 4-channel, and 6-channel, and each channel has the same performance indicators, and the multi-channels can be combined and operated under the control of master control CPU, for example the realization of three-phase measurement, input/output efficiency measurement, etc. This series of power analyzer has high precision, fast sampling, and many functions, in addition to the basic electric parameter measurement function, there are harmonic analysis function, integral function, variable ratio function, data storage/call function, communication function, etc., which can be applied to the enterprise quality inspection, R & D department and third-party testing department with high precision requirements.

Key Features

- Input signal bandwidth: DC, 0.5Hz~100 kHz Digital tube display;
- Sampling frequency:100kS/s;
- Basic accuracy: $\pm(0.05\% \text{rdg.} + 0.1\%\text{f.s.})$;
- Current measurement: 2A/5A/20A/50A optional;
- With voltage and current harmonic analysis function;
- Waveform and trend graph can be displayed;

Model selection

Model	Channel	Display mode
RJ311	1	7-segment digital tube 5.6-inch LCD
RJ310	1	
RJ330	3	
RJ340	4	
RJ360	6
